

## Project Executable Files

|                      |                                                        |
|----------------------|--------------------------------------------------------|
| <b>Date</b>          | 02 July 2026                                           |
| <b>Team ID</b>       | xxxxxx                                                 |
| <b>Project Name</b>  | Credit Card Approval Prediction using Machine Learning |
| <b>Maximum Marks</b> | 3 Marks                                                |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

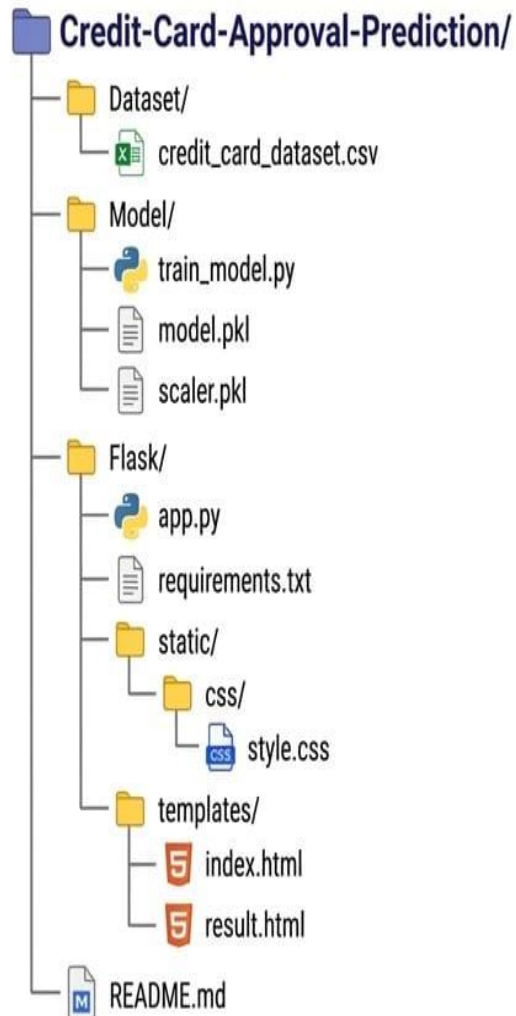

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA) |
|------|-----------------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                       |
| 3    | requirements.txt / package.json / dependency file               | Yes                       |
| 4    | Database schema / seed files (if applicable)                    | NA                        |
| 5    | Environment configuration file (.env.example or similar)        | Yes                       |
| 6    | Deployed application URL (if hosted)                            | No                        |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                        |
| 8    | Dockerfile / Containerization config (if applicable)            | NA                        |
| 9    | Test files and test results                                     | Yes                       |

|    |                                         |     |
|----|-----------------------------------------|-----|
| 10 | Demo video or walkthrough (if required) | Yes |
|----|-----------------------------------------|-----|

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

### Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                                                             |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | <a href="https://huggingface.co/spaces/PradeepKumar143/credit-card-approval">https://huggingface.co/spaces/PradeepKumar143/credit-card-approval</a>                                 |
| <b>Login Credentials (Demo)</b>    | Not Required                                                                                                                                                                        |
| <b>Platform / Hosting Provider</b> | Hugging Face Spaces                                                                                                                                                                 |
| <b>Repository Link</b>             | <a href="https://github.com/24P32A4212/Credit-Card-Approval-Prediction">https://github.com/24P32A4212/Credit-Card-Approval-Prediction</a>                                           |
| <b>Demo Video Link</b>             | <a href="https://drive.google.com/file/d/1gSYmB1MyQp7Z-WtIJEbRR9OfSVkLUMNx/view?usp=sharing">https://drive.google.com/file/d/1gSYmB1MyQp7Z-WtIJEbRR9OfSVkLUMNx/view?usp=sharing</a> |

### Step 4: Run Instructions

#### Option 1: Run the Project Locally

Install Python 3.8 or above.

Open the project folder in VS Code or PyCharm.

Install the required dependencies:

```
pip install -r requirements.txt
```

Run the application:

```
python app.py
```

Open a web browser and navigate to:

<http://127.0.0.1:5000/>

Enter the applicant details and click Predict to view the loan eligibility prediction.

#### Option 2: Access the Live Application

If you do not want to run the project locally, you can access the deployed application using the link below:

Live URL:

<https://huggingface.co/spaces/PradeepKumar143/credit-card-approval>

Open the link in a web browser, enter the applicant details, and click Predict to view the loan eligibility result.

### Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                      | Workaround / Status                                                                          |
|------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| 1    | Prediction accuracy depends on quality of the dataset         | Improved through data preprocessing and model tuning.                                        |
| 2    | Prediction history is not stored.                             | Can be implemented using a database in future versions.                                      |
| 3    | The application currently predicts only credit card approval. | Future versions can include credit score analysis, fraud detection, and customer dashboards. |
